

# Commercial Carpet Cleaning

# Spot Out

## Direction for Use.

**IMPORTANT!!** Never rub! Always blot! –Rubbing causes the threads and fibers to scuff, setting the stain in permanently, and damaging your carpet or furniture.

**IMPORTANT!!** Never place metal or wooden objects onto wet furniture or carpet. –this causes rust, and furniture stains, which can be permanent.

**IMPORTANT!!** Always test carpet and upholstery before applying spot out to any surface.

### DO NOT USE ON:

#### Ink, Toner, Paint, Nail Polish

Instead, call Commercial Carpet Cleaning to have the spot professionally handled.

### RECOMMENDED USES:

**Pet Accidents, Food Spills, Beverage Spills, Blood, Plant, Coffee grains, and Tea. Red Stains** –if immediately remedied.

Results not expected on dry or old red stains.

**1** Tackle the spot immediately or as soon as possible for best results!

**2** First you will want to remove as much solid substance from the spot as possible, using a plastic (non-abrasive) spoon or knife, scraping from the edges, inward, to prevent spreading the stain. Repeat this process until you are left with ONLY the spot.

**3** Next you will take a CLEAN, DRY, WHITE washcloth, and dab (do not rub) the spot until no more soiling is transferring to the towel. Repeat this process using a new towel once the first is soiled.

**4** Using your Commercial Carpet Cleaning Spot Out, apply a liberal amount of the solution directly to the spot. Be careful not to over wet the spot, but you can be generous.

**5** Repeat step 3, re wetting the spot with Commercial Carpet Cleaning Spot Out, until there is no more transfer.

**6** At this point the spot should be nearly, or completely gone.

**7** If the spot is still showing, wet a new CLEAN, WHITE washcloth, and wring out only so it is not dripping. You want the cloth to be pretty wet. Place the cloth directly onto the spot, and step on it, or apply pressure.

**8** Place a heavy PLASTIC object (such as plastic garbage bin with telephone books piled in) onto the wet towel which is still on the spot. Give the area time to dry (usually overnight). While the cloth is drying, it causes the spot to lift into the cloth.

**Commercial Carpet Cleaning Spot Out is very effective. If the spot did not lift with the first application, try a second application. As long as you are seeing transfer to the towels, you are making progress. Remember, patience is key.**

**Commercial Carpet Cleaning Spot Out is meant for small manageable spots, and NOT intended for upkeep of traffic areas, or large messes.**
